Crew safety and confort is SBR main concern so that each transfert as place under the best possible conditions. Find all the information you need to prepare your trip below.

Get ready to crew transfer at OPL Reunion Island

BEFORE and DURING your crossing

1. Hydrate

Drink a lot of water ! It is recommended to drink 2-3 glasses of water every five hours. Avoid tea, coffee and soft drinks as much as possible. It is forbidden to drink alcohol on the ships. Passengers are therefore not permitted to carry or consume alcohol on board.

2. Wear appropriate clothing

For your safety, wear suitable pants or shorts and closed, non-slip shoes. You can wear short sleeves or a T-shirt.

3. relax

Keep calm and relax during the ride. During the transfer, it is imperative not to wear earplugs in order to be able to hear any potential instructions from the **CrewBOAT**.

4. Are you prone to seasickness?

If necessary, take pills against motion sickness before boarding (refer to the leaflet).

Watch your diet before and during the trip, as well as the drinks you take.

Heavy, spicy or fatty foods can increase the feeling of nausea in some people.

Choose a seat located in the center of the ship

Sit in the direction of the ship's direction.

Avoid reading during the crossing, look far at the horizon or at a fixed point to avoid seasickness.

5. Listen to the CrewBoat instructions

During the transfer, it is important to listen to all the safety instructions that will be given by the **CrewBOAT**

-Hull mapping, thickness measurement, video

-checking the condition of the hull, welds, **VERITAS** report

The intervention team is trained in the world of boating, diving, is specialized in difficult access work, will be able to meet your needs and advise you on a case-by-case basis.

Don't hesitate to contact us !

Intervention all year round

In recent decades, techniques for cleaning ship hulls by divers evolved considerably and above all increased ship performance.

SBR company offers you a competitive service, with experienced staff and unparalleled tools in the area.

"The regular follow-up of the propellers is an indicator of the efficient management of a cargo and therefore of its consumption..."

SERVICES BOAT RÉUNION

07

Performances

The good condition of a propeller is of **major importance to a vessel's performance.**

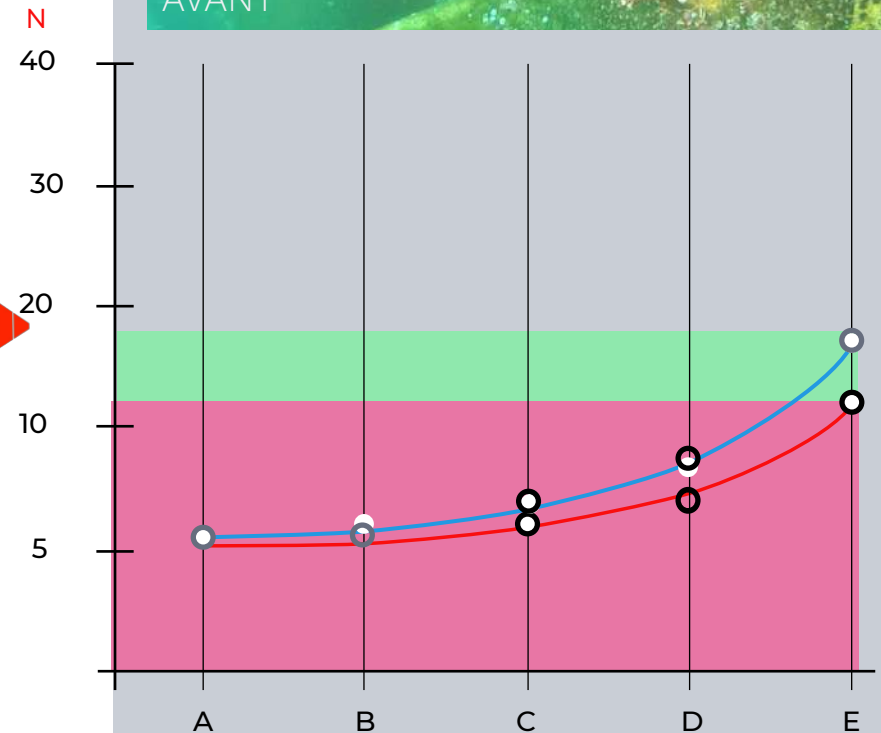

Indeed all the power of the engine is converted into displacement of the vessel by this single component.

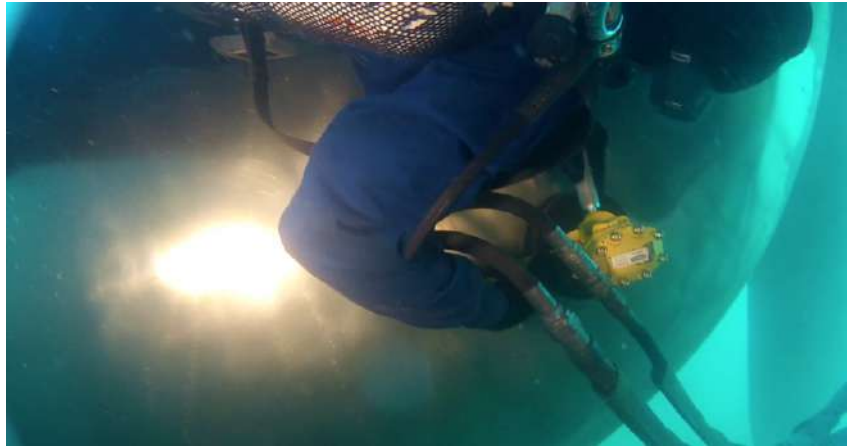

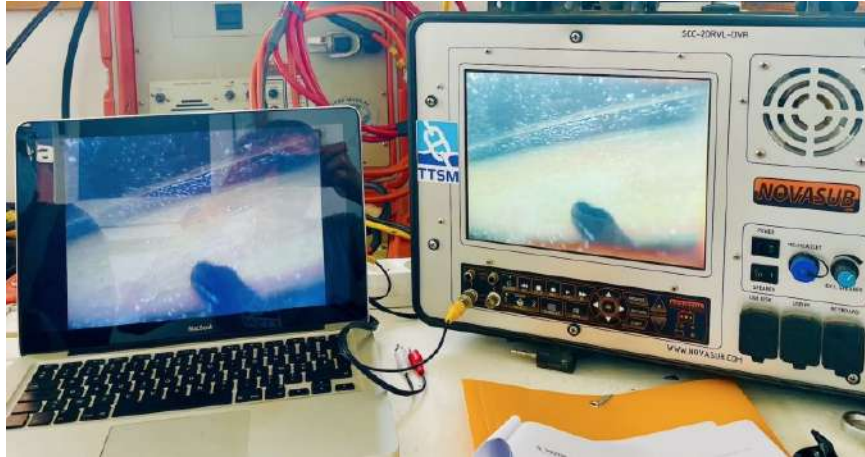

The slightest imperfection on the leading edge of the blades, or a degraded surface condition systematically penalizes the ship:

-Increased fuel consumption and decreased performance

- Abnormal engine temperature rise

-Vibrations that can lead to problems with resonance, cavitation and propeller degradation

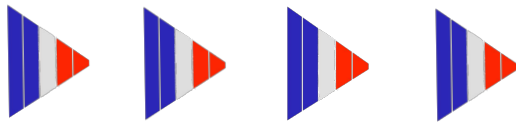

Once the job's achieved, we provide a diver's report with before / after photo or video.
